

# Heart of the South West

## Your Introduction to LMI

The purpose of this resource is to make sure that you have understood what Green Skills are, why they are important, and what future careers are available to you in the sector.

To get things started, watch the 'Green Skills Explained' animation (we recommend watching this more than once).

Next, to ensure that you have understood the animation, answer the following questions:

**What is the Carbon Net Zero plan?**

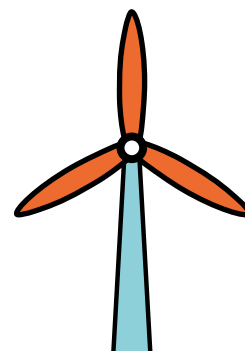

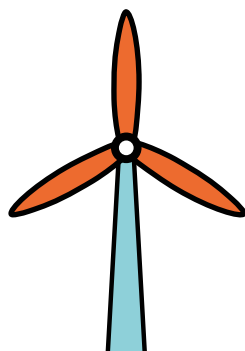

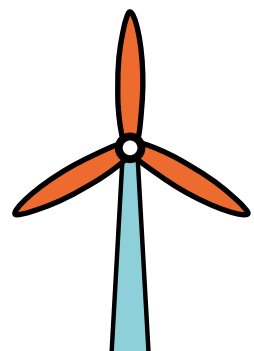

**Environmental industries**

**What STEM jobs dominate the Green sector? Name at least three.**

**The definition of 'green skills' includes skills related to what fields? Name four.**

**What is the simplest definition of 'green skills'?**

**What are the most in-demand 'green skills' for the job market?**

## Optional next step

As an optional task, you can carry out your own research. You will need access to the Internet for this.

Use the list of green careers provided below to find out a bit more about them, including what apprenticeships or diplomas may be required.

We ask you to only pick ONE of the careers listed.

Next, answer the following three questions:

- What are the main skills this job requires you to have?
- What accreditations or education are needed to enter this career path?
- What apprenticeships related to this job are available in your area?

## Green careers to research:

**Climate Scientist**

**Energy Manager**

**Solar Installer**

**Environmental Consultant**

**Wind Turbine Electrician**
